The Storrs & Harrison Co.'s

PRICE LIST

.... OF

Fruit and Ornamental Trees

Grape Vines, Small Fruits, Etc.

By Express or Freight, Purchaser Paying Charges.

For Spring of 1895.

Painesville, Lake Co., O.

One Thousand Acres Devoted to the Nursery Business.

In filling orders from this list we reserve the right, in case that we are out of a variety, to substitute another of equal merit when it can be done, (always labeling with correct name), unless the party ordering says "no substituting," in which case we will fill the order so far as we can, and return the balance. All goods ordered from this list must be sent by express or freight, customers paying charges on receipt of goods. All heavy trees in large amounts should be sent by freight, as charges are so much less, and our perfect packing admits a long journey without injury to the trees. Always give full and explicit directions, as our responsibility ends on delivery of trees in good condition to the freight office.

We shall be pleased to quote prices to any one desiring different sizes of stock in larger quantities than offered herein; in sending list state definitely the number of each variety and size wanted.

For varieties and description see Catalogue No. 1, which will be mailed on receipt of 10 cents.

Guarantee of Genuineness.

While we exercise the greatest care and diligence to have all our trees, etc., true to label, and hold ourselves in readiness, on proper proof, to replace all trees, etc., that prove untrue to label, free of charge, or refund the amount paid, it is mutually understood and agreed to between the purchaser and ourselves, that our guarantee of genuineness shall in no case make us liable for any sum greater than that originally received for said trees, etc., that prove untrue.

TERMS.

Net cash with order. No discounts allowed. 5 at 10 rates; 50 at 100 rates; but if remittance amounts to \$25.00 and up, everything at lowest rate quoted in this Price List, both fruit and ornamental.

Remember that we employ no agents, and are responsible only for orders sent to us through the mail or delivered in person. No charge for packing or delivery at express office or railway station here.

RASPBERRIES.

Gault. (Everbearing). For many years fruit growers have been looking for an everbearing black-cap of large size, hardy, good grower and productive. On the originator's grounds and elsewhere as far as tested the Gault meets all the requirements. Have carefully watched this variety for several seasons and have no hesitancy in recommending it to all small fruit growers. Our illustration is made from a photograph of a cluster of ordinary size picked Sept. 21st, 1893.

Mr. Gault says: "This berry was a stray seedling I found by the roadside. The vines are extremely hardy, and the fruit of delicious flavor. As to size, they are immense, some crown berries having measured three inches in circumference. When I found the plant it was quite small, and had but three clusters of berries on it. The size of the fruit was that which attracted my attention. It was a year later before I discovered that it was a *perpetual*; and during the seven years since I discovered it I have frequently been surprised by new points of merit.

The first crop commences ripening about the time of Gregg, is more abundant and continues in bearing for three or four weeks, by which time the new canes begin to fruit, and continue until checked by frost. This latter crop does not consist of a few scattering berries at the axils of the leaves, but *immense clusters*, often numbering 100 berries on a single cane. While many of these clusters seem immense, yet they do not exhaust the vitality of the wood, for the same cane will bear a full crop next year. The young sets, when planted in the spring, will bear fruit in the fall of the same season. Many persons have visited my grounds, and examined the vines and fruit, and unite in testifying that the reality exceeded their expectations. They must be seen to be appreciated.

GAULT.

Loudon. A new variety originating with that veteran horticulturist, F. W. Loudon, of Wisconsin, and claimed to be the greatest advance in red raspberries since Cuthbert. Its points of superiority are vigor of growth, large fruit, beautiful rich dark crimson color, good quality, and marvelous productiveness and hardiness, enduring winters without protection and without injury to the very tips. It stands shipping the best of any variety, and will remain on bushes the longest without injury. Originated ten years ago, Mr. Loudon has been marketing the fruit for many years; has also been tested in New York, Ohio, and on Rural New Yorker's experimental grounds. The latter says: "Likely to supersede the Cuthbert, more vigorous, perfectly hardy, averages larger, adheres well to the stem, never crumbles, bright red, darker when dead ripe."

Royal Church. Very productive, over 150 berries have been counted on a single stem; 100 berries weigh 11 ounces; has but few seeds, produces no small berries. Exceedingly delicious, aromatic, and sprightly, excellent for table, canning, jellies, etc. Canes are large, vigorous grower, thorns few and small; hardy wherever it has been tested.

Royal Church is earlier than Cuthbert, yet continues longer in bearing. It combines the large size and superior quality of the best foreign varieties with the vigor and hardiness of our native varieties.

DUTCHMAN'S PIPE.

(ARISTOLOCHIA SIPHO.)

A magnificent hardy vine of rapid growth, with very large heart-shaped leaves and brownish flowers, resembling in shape a miniature pipe; splendid for archways or verandas. 35c.

DUTCHMAN'S PIPE.

JAPANESE MAPLES.

Foremost among ornamental stock are the Japanese Maples, which for beauty of coloring are unsurpassed. They are yearly gaining in favor and for effective grouping in landscape gardening are invaluable and unrivaled. Strong plants in fine assortment, including varieties with finely-cut, bright and dark red, yellow and green and variegated leaves.

CHESTNUTS.

Two varieties; grand improvements on common American type; strong trees grafted, 4 to 6 feet high.

Numbo. A superior variety which originated in Bucks Co., Pa., more than forty years ago; and has proven to be perfectly hardy, enormously productive and a regular bearer. The average crop of the original tree for five consecutive years was sixty-two quarts per year. In the autumn of 1890 it bore over one hundred quarts. The nuts are of very large size, forty of them (selected) will make one quart. Of handsome appearance, excellent quality, and ripens early, usually before frost.

Paragon. A magnificent variety. Nuts large, three or more in a burr, of very good quality. Vigorous grower, early and abundant bearer. Supposed to be a seedling of the Spanish.

LANCASHIRE LAD.

Gooseberry, Lancashire Lad. One of the largest and best of the English varieties. Fruit smooth, bright red, extra size, fine quality, one of the best dessert berries. Bush strong grower and productive.

VIBURNUM PLICATUM.

(JAPAN SNOWBALL.)

This Japanese variety of the old fashioned snowball is one of the most valuable of our hardy shrubs. It forms an erect, compact shrub six to eight feet high; it blooms in early June and for a long time is a solid mass of white, the plants being completely covered from the ground to the top of the branches with large balls of flowers as white as snow; often as many as twenty balls of flowers on a branch 18 inches long. The foliage in early summer is an olive green turning to a very dark green later in the season.

JAPAN SNOWBALL.

TREE ROSES.

The Tree Roses are grafted on hardy rose stalks four to five feet high, are tree shaped and when in full bloom are objects of beauty, making handsome plants for the lawn or rose border. In this shape we offer only the Hybrid Perpetual or hardy class. We have them in white, the different shades of pink, red and crimson. Fine strong trees that will bloom nicely the first year.

NEW HYBRID RUGOSA ROSE.

Agnes Emily Carmen. This fine, hardy, free-flowering garden rose originated with Mr. E. S. Carmen at the Rural New Yorker experimental grounds. It is a cross between Rugosa Rosea and Harrison's Yellow, both remarkably hardy, vigorous varieties, and is fully as hardy as either. The growth is robust, with dense rich foliage, somewhat similar to the Rugosa. Flowers large, semi-double, fine in the bud state. A remarkably free bloomer, and continues in bloom a long time. Color rich deep crimson. Its hardiness, strong vigorous growth and rich heavy foliage would make it popular as a hardy ornamental shrub if it did not flower, but when covered with its mass of rich crimson bloom it is doubly attractive.

TREE ROSE.
